

The EU LIFE-Environment Project AGWAPLAN invites to a European conference on

# IMPROVED WATER QUALITY THROUGH GOOD AGRICULTURAL PRACTICES

14 – 15 January 2009 Herning, Denmark

The overall objective for AGWAPLAN is to facilitate the implementation of the Water Frame Directive (WFD) while still allowing room for farming.

In order to mediate and discuss the result of the project a final conference will be held from 14 – 15 January 2009 in Herning, Denmark.

## Conference theme

*The themes for the conference will be:*

- Estimation of good environmental status in line with the WFD
- Prediction models for nitrate leaching; phosphorus index
- Good agricultural practice, examples and impacts
- How to combine environmental and farm data for sustainable production
- From source to recipient – processes affecting N and P levels
- Collaboration between environmental authorities, research and farming - an integrated approach
- Sociological studies related to implementation of environmental legislation

## Participants

*The conference participants will include:*

- Colleagues from other projects in the EU working on the above subjects
- Politicians in Europe with an interest in improved integration of agriculture and the environment
- European researchers with interest and/or expertise in the above subjects
- Environmental authorities in Europe
- Agricultural advisors in Europe
- Stakeholders and other interested parties

## Networking

Related projects with an interest in collaboration are welcome to contact us for provision of inputs, co-organisation, discussions on the above subjects, etc.

## Further information
